US-CL-CURRENT: 707/10; 719/311, 719/316, 719/326

ABSTRACT:

A method for persisting a container-managed server object or bean in a distributed
data processing system is provided. A method in a Tie object is invoked by the
container of the bean to assist in the persistence of the bean. The bean may have
container-managed fields of both primitive and complex data-types, and the complex
data-types may include references to other objects or beans. The Tie object obtains
the object reference to the other object. The Tie object unwraps an adapter from
the object reference to obtain a proxy of the referred object and stringifies the
proxy. The string is then stored by the container in a back-end data store as a
known primitive data-type. The referred object may be resurrected by unstringifying
the string and reversing the process.
